¹ For the purpose of this publication, the terms “country” and “countries” refer to countries, territories and areas.

² Risk of yellow fever transmission is defined as yellow fever being currently reported, or having been reported in the past, and the presence of vectors and animal reservoirs representing a potential risk of infection and transmission.

³ Country requirements are subject to change at any time. It is important for travellers to ensure that they know the requirements of the country to which they are travelling by checking with the relevant consulate or embassy.

Period of validity: In accordance with the amendment to the IHR (2005) adopted by the World Health Assembly in resolution WHA67.13, from 11 July 2016 the period of validity for all certificates of vaccination against yellow fever changed from 10 years to the duration of the life of the person vaccinated, including for certificates already issued and new certificates. Accordingly, as of 11 July 2016, valid certificates of vaccination presented by arriving travellers cannot be rejected on the grounds that more than 10 years have passed since the date on which the vaccination became effective, as stated on the certificate. Boosters or revaccination cannot be required.

⁴ Includes yellow fever vaccination requirement for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

⁵ The risk of yellow fever transmission is present only in parts of the country. For details, refer to [the International Travel and Health country list](#).

⁶ The list of countries these requirements apply to differs from WHO’s list of countries with risk for yellow fever transmission. For details, refer to [the International Travel and Health country list](#)

⁷ Includes yellow fever vaccination requirement for travellers having transited through the airport of a country with risk of yellow fever transmission.
